**WHERE: UUCJ - Social Hall * Unitarian Universalist Church of
Jacksonville, 7405 Arlington Expressway, Jacksonville, FL 32211**

**Award-winning film *Kilowatt Ours*: A Plan to Re-Energize
America is a timely, solutions-oriented look at one of America's
most pressing environmental challenges: energy.**

Filmmaker Jeff Barrie offers hope as he turns the camera on himself and asks, "How can I make a difference?" In his journey, Barrie explores the source of our electricity and the problems caused by energy production including mountain top removal, childhood asthma and global warming. Along the way he encounters individuals, businesses, organizations, and communities who are leading the way, using energy conservation, efficiency and renewable, green power all while saving money and the environment.

This often amusing and always inspiring story shows, "You can easily make a difference and here's how!"

Kilowatt Ours is a film designed to educate the general public regarding where electricity comes from, why it is important that we reduce the amount of electricity we use, and practical steps we can take as individuals, families and organizations to cut our electrical use. Examples of significant energy savings are drawn from the filmmaker's own apartment, from other homeowners, from school districts, cities,

and large businesses. This film was produced in conjunction with the Southern Energy Conservation Initiative. It suggests connections between an average homeowner's electrical energy use and adverse health and environmental impacts, including mountain top removal coal mining, global warming, and asthma. *Kilowatt Ours* shows the actions that homeowners, businesses and communities can take to save money by saving energy and reducing their demand for energy. The film also suggests benefits of sustainable energy.

Kilowatt Ours will be followed by a 15 minute DVD called "*The New Dream*". A short film, which explains the concept of green jobs and its importance from a social justice stand point.
